

Zimbra™ Leverages the Cloud to Deliver the Industry's Most Flexible Collaboration Platform to Educational Institutions

Zimbra is the Only Open Collaboration Suite That Offers Both On-Site and Hosted Editions, Taking Advantage of Yahoo!'s Worldwide Infrastructure to Offer a Range of Deployment Options

SUNNYVALE, Calif., Oct 28, 2008 (BUSINESS WIRE) -- Zimbra, a division of Yahoo! Inc. (Nasdaq:YHOO) and the leader in open source, next-generation messaging and collaboration software, today announced that educational institutions will now have access to the award-winning Zimbra Collaboration Suite™ (ZCS), without having to manage on-premise software and hardware. Zimbra Hosted leverages the global cloud computing power of Yahoo! to bring world-class collaboration to educational institutions, which can now choose which delivery method -- on-site, Zimbra hosting, or hosting through local partners -- will best meet the needs for collaboration within their community. The flexibility that Zimbra offers is unmatched by competitors and helps schools decide how best they can serve their diverse constituencies -- students, alumni, faculty, and staff.

"With over 30,000 students, faculty, and staff, not to mention thousands of alumni, we needed a collaboration system that would offer best-in-class email and calendar for our students and enterprise features for our faculty," said James Lyall, associate vice proost of IT at Kansas State University. "We evaluated many collaboration systems, and found that there was nothing else on the market that could compare to Zimbra Hosted, which offers superb technology, and delivers different tiers of service for our different constituencies. Additionally, we can retain control over the system through flexible branding and privacy options, without worrying about installation, upgrades or maintenance."

Zimbra Hosted leverages Yahoo!'s worldwide infrastructure, allowing Zimbra to provide proven service level agreements (SLA) - with 99.9 percent guaranteed uptime, 24/7 support and built-in disaster recovery features. By taking advantage of cloud computing, Zimbra brings customers powerful access to its communication and collaboration tools without associated infrastructure costs and resources for technology management and administration. Users of Zimbra Hosted will not need to implement software upgrades, pay for maintenance, or add additional hardware.

"More than 500 educational institutions are already using Zimbra's collaboration and communications software, but our customers wanted more options and flexibility for delivery and management," said Satish Dharmaraj, Zimbra co-founder and Yahoo! vice president. "Zimbra is the partner of choice with the only open collaboration solution on the market that is built from the ground up to offer both on-site and hosted options. With the new Zimbra Hosted, we have removed the challenge of managing thousands of mailboxes and encouraged schools to rebrand Zimbra as their own, creating a communications portal that connects all key audiences."

Zimbra's Hosted solution offers educational institutions the sleek Zimbra experience, with the latest in online and offline technology, enabling better collaboration amongst students, faculty, staff, and alumni. Key features of the Zimbra Hosted for Education include:

- Control over look, feel, and brand options including logo/color scheme of collaboration suite, enabling schools to build a communications hub around Zimbra;
- Special faculty packages that include enterprise-grade feature (Outlook® Sync, Apple® sync, BlackBerry® and more);
- Mobile access to Zimbra on a wide range of handsets including the iPhone™, J2ME™ enabled devices, or any mobile web browser, giving students, faculty, and staff the option to use any device they wish;
- Comprehensive group scheduling calendar, along with RSS and Atom support, which allows schools to pre-populate the ZCS with campus-wide events, sporting events, lectures, or even class schedules;
- Important tools for reducing maintenance costs for system administrators including per mailbox restore;
- Data privacy and protection policies that enable educational institutions to maintain control over the contents of their collaboration suite;
- Offline access via Zimbra Desktop, the AJAX experience for Zimbra users and users of existing POP and IMAP e-mail servers;

-- Native e-mail, contacts, synchronization from Zimbra to Outlook 2007; and

-- Ability to integrate with Internet and intranet data, as well as third-party application "mash-ups" (Zimlets).

Pricing and Availability

Zimbra Hosted for Education is available for students, faculty and alumni. Pricing is per mailbox and varies for different product versions. Zimbra offers substantial discounts for the education market -- contact sales@zimbra.com for the latest pricing.
